Integration of vector fields

A short memo

Sebastiano Ferraris

Introduction

Let

$$i = \sqrt{-1}$$

$$e = \sum_{m=0}^{\infty} \frac{1}{m!}$$

$$\pi = \sqrt{6 \left(\sum_{m=1}^{\infty} \frac{1}{m^2} \right)}$$

Then

$$e^{\pi i} + 1 = 0$$

... Everything is under control!
